

Give your team some merch

Share a digital gallery, or even get your team's characters printed on custom tumblers. No purchase is needed to complete the workshop.

Want us to help? Email service@wrapware.com with the accepted character artwork, approved team logo, real names, quantities and any target date. We can help prepare your designs for printing and work out the order details with you.

Preparing your own files? Keep the character people already accepted. Arrange it with the same shared logo using this layout. The participant's real name should appear once, spelled exactly as on their worksheet.

A simple repeatable layout

2700 x 1650 pixels / 300 dpi / background fills every edge

Dashed line = 150-pixel important-content margin. The boxes and labels are only a placement diagram; do not include them in the finished wrap.

Keep the full character, readable real name, both logos and meaningful details inside the margin. If the real name already appears correctly in the accepted image, do not add it again. Fit images proportionally; never stretch them.

Use the same background treatment and logo positions for every participant. Keep the far left and right edges visually compatible because they meet at the back of the tumbler.

Prepare the file, then check it

Recommended: finish the individual characters first, then use a layout tool to place the accepted images and logo. This preserves the character and keeps buying tumblers optional.

If your group already wants tumbler designs from the start, use the alternative wrap-first prompt with the approved logo attached. A generated preview still needs a final export and file check.

Your file specifications

Horizontal canvas: exactly 2700 x 1650 pixels.

PNG with 300-dpi metadata; use RGB color.

Background fills every edge.

Important details stay at least 150 pixels from every edge.

No borders, guide lines or extra text. The real name and approved team-logo lettering are explicitly requested.

Starter placement zones (pixels measured from the top-left corner)

Character and real name: x 850-1850, y 150-1500.

Left logo: x 200-750, y 550-1100.

Right logo: x 1950-2500, y 550-1100.

These zones are layout instructions, not visible outlines.

Copy-ready prompts

Open **Optional - Tumbler prompts.txt** in the kit. Prompt A arranges accepted artwork and the exact logo. Prompt B requests a wrap composition from the beginning. Both include your specifications, name rules, logo placement and export verification.

Before calling it ready to print

Reopen the actual downloaded PNG. Verify its dimensions, RGB color and 300-dpi metadata. Check every letter of the real name, both logo copies, the full character and the 150-pixel content margin. Confirm there are no guide layers. Increasing DPI metadata alone does not add detail.

Before ordering

Inspect the product preview, including the back join. Confirm tumbler options, recipient-to-design matching, quantities, budget and timing. Contact Wrapware if you need help with the file or group order.
